

Requirement → BDD-Index

Maschinell aus den Szenario-Tags der BDD-Suite erzeugt (@DCS-... -Annotationen in `features/**/*.feature`). Für jede SRS-Anforderungs-ID sind alle Szenarien gelistet, die sie verifizieren. Gegenrichtung (Szenario → Anforderung): die Tag-Zeile direkt am Szenario. Ergänzt `docs/TRACEABILITY_SRS_BDD.md` (Abdeckungsbewertung) und `docs/abnahme/bdd-suite-mapping-2026-06-25.md` (alt→neu-Mapping).

Stand: 281 Szenarien, 142 referenzierte Anforderungs-IDs, 4 Szenarien ohne SRS-Zuordnung (Abschnitt am Ende).

DCS-FR-CSA-02

- `01_authentication_authorization/auth_and_access_control.feature` — Access restricted endpoint responds with access denied (Archive)
- `07_contract_storage_security/archive_management.feature` — A role outside the archive scope cannot retrieve the archive
- `07_contract_storage_security/archive_management.feature` — A read-only Observer can view the archive but cannot delete from it

DCS-FR-CSA-08

- `05_contract_deployment/contract_deployment.feature` — Archive entry is created only when the contract reaches SIGNED, not at APPROVED

DCS-FR-CSA-09

- `03_contract_creation/contract_creation.feature` — Create contract from template

DCS-FR-CSA-10

- `07_contract_storage_security/archive_management.feature` — Archive search filters by contract state

DCS-FR-CSA-11

- `07_contract_storage_security/archive_management.feature` — Archive Manager annotates an archived contract with a manual summary and tags
- `07_contract_storage_security/archive_management.feature` — Searching the archive by tag returns only contracts carrying that tag
- `07_contract_storage_security/archive_management.feature` — Annotating without a summary generates one from the contract metadata

- `07_contract_storage_security/archive_management.feature` — A read-only role cannot annotate an archived contract

DCS-FR-CSA-12

- `07_contract_storage_security/archive_management.feature` — Archive Manager retrieves the full archive list

DCS-FR-CSA-13

- `07_contract_storage_security/archive_management.feature` — Archive search filters by contract state
- `07_contract_storage_security/archive_management.feature` — Archive full-text search finds a contract by terms inside its content

DCS-FR-CSA-15

- `06_contract_lifecycle/contract_termination.feature` — Renewal contract references the original contract's DID and version

DCS-FR-CSA-16

- `06_contract_lifecycle/contract_termination.feature` — Contract Manager terminates an approved contract

DCS-FR-CSA-17

- `07_contract_storage_security/archive_management.feature` — Archive Manager deletes an archived contract with a logged justification
- `07_contract_storage_security/archive_management.feature` — A role outside the archive scope cannot delete an archived contract

DCS-FR-CSA-18

- `07_contract_storage_security/archive_management.feature` — Auditor retrieves the archive audit log
- `08_audit_compliance/audit_ui_archive_orce.feature` — SIGNED archival records real signing evidence without credential disclosure
- `08_audit_compliance/audit_ui_archive_orce.feature` — ORCE continues the persisted chain after a restart
- `08_audit_compliance/audit_ui_archive_orce.feature` — ORCE protects both append and retrieval with the configured bearer token

- `08_audit_compliance/audit_ui_archive_orce.feature` — ORCE append is idempotent and rejects conflicting reuse of an archive ID
- `08_audit_compliance/audit_ui_archive_orce.feature` — Audit and export access records the actor and mandatory purpose
- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — Contract bundle export honors RBAC like retrieval
- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — Contract bundle export creates an audit log entry

DCS-FR-CSA-19

- `08_audit_compliance/audit_ui_archive_orce.feature` — A valid archive entry passes each independent integrity rule
- `08_audit_compliance/audit_ui_archive_orce.feature` — Archive evidence defects are returned as individual failed findings
- `08_audit_compliance/audit_ui_archive_orce.feature` — One damaged archive entry does not hide a valid entry and both audit routes agree

DCS-FR-CSA-20

- `08_audit_compliance/process_audit_and_compliance.feature` — Compliance Officer runs continuous monitoring

DCS-FR-CSA-24

- `08_audit_compliance/audit_ui_archive_orce.feature` — Auditor can filter every audit scope to a real resource DID
- `08_audit_compliance/audit_ui_archive_orce.feature` — Archive Manager is restricted to the archive audit scope
- `08_audit_compliance/audit_ui_archive_orce.feature` — Archive integrity results carry unambiguous workstation semantics
- `08_audit_compliance/audit_ui_archive_orce.feature` — Audit and export access records the actor and mandatory purpose
- `08_audit_compliance/audit_ui_archive_orce.feature` — One damaged archive entry does not hide a valid entry and both audit routes agree

DCS-FR-CSA-26

- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — Sibling isolation — instance B never sees a child kept local to instance A

DCS-FR-CWE-02

- `03_contract_creation/contract_creation.feature` — Create contract with hierarchical structure
- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — A contract document with more than one `dc:parentContract` reference is rejected
- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — A contract document with a child-enumerating property is rejected
- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — A contract whose locally resolvable parent chain contains a cycle is rejected

DCS-FR-CWE-03

- `03_contract_creation/contract_creation.feature` — Create contract from template
- `03_contract_creation/contract_creation.feature` — Created contract renders in both machine-readable and human-readable views
- `03_contract_creation/contract_creation.feature` — Draft contract is editable and versioned
- `03_contract_creation/contract_creation.feature` — Assemble contract from reusable clauses
- `03_contract_creation/contract_creation.feature` — Create contract with hierarchical structure
- `03_contract_creation/contract_creation.feature` — Bundle multiple contracts into a package
- `03_contract_creation/contract_creation.feature` — Auto-fill metadata from template
- `03_contract_creation/contract_creation.feature` — Unauthorized role cannot create contracts
- `03_contract_creation/contract_creation.feature` — Contract Creator can only create contracts for authorized parties
- `03_contract_creation/contract_creation.feature` — Created contract is accessible only to authorized parties
- `03_contract_creation/contract_creation.feature` — Unauthorized party cannot access created contract

DCS-FR-CWE-04

- `03_contract_creation/contract_creation.feature` — Created contract renders in both machine-readable and human-readable views
- `03_contract_creation/contract_format_review.feature` — View contract in machine-readable format
- `03_contract_creation/contract_format_review.feature` — View contract in human-readable format
- `03_contract_creation/contract_format_review.feature` — Synchronized view of both formats
- `03_contract_creation/contract_format_review.feature` — System highlights inconsistencies between formats
- `03_contract_creation/contract_format_review.feature` — Export both formats with same version tag
- `03_contract_creation/contract_format_review.feature` — Validate machine-readable structure
- `03_contract_creation/contract_format_review.feature` — Fix inconsistency and re-validate
- `03_contract_creation/contract_format_review.feature` — Unauthorized role cannot access format review

- `03_contract_creation/contract_format_review.feature` — Export contract as PDF and verify MR/HR hash match
- `03_contract_creation/contract_format_review.feature` — Verify MR/HR content hash consistency
- `03_contract_creation/contract_format_review.feature` — Tampered PDF fails hash verification
- `08_audit_compliance/c2pa_provenance_export.feature` — Verify endpoint confirms MR/HR hash match on freshly exported PDF
- `22_real_signing_vertical/real_signing_vertical.feature` — The signature record binds both the PDF hash and the JSON-LD content hash

DCS-FR-CWE-05

- `03_contract_creation/contract_creation.feature` — Created contract renders in both machine-readable and human-readable views
- `03_contract_creation/contract_format_review.feature` — View contract in machine-readable format
- `03_contract_creation/contract_format_review.feature` — View contract in human-readable format
- `03_contract_creation/contract_format_review.feature` — Synchronized view of both formats
- `03_contract_creation/contract_format_review.feature` — System highlights inconsistencies between formats
- `03_contract_creation/contract_format_review.feature` — Export both formats with same version tag
- `03_contract_creation/contract_format_review.feature` — Validate machine-readable structure
- `03_contract_creation/contract_format_review.feature` — Fix inconsistency and re-validate
- `03_contract_creation/contract_format_review.feature` — Unauthorized role cannot access format review
- `03_contract_creation/contract_format_review.feature` — Export contract as PDF and verify MR/HR hash match
- `03_contract_creation/contract_format_review.feature` — Verify MR/HR content hash consistency
- `03_contract_creation/contract_format_review.feature` — Tampered PDF fails hash verification

DCS-FR-CWE-06

- `05_contract_deployment/contract_deployment.feature` — Deployment is triggered automatically once the signing workflow completes
- `15_access_revocation/signature_revocation_state.feature` — A revoked contract can be re-approved to allow re-signing

DCS-FR-CWE-07

- `01_authentication_authorization/auth_and_access_control.feature` — Access restricted endpoint responds with access denied (CWE)

- `02_template_management/generate_contract.feature` — Unauthorized role cannot generate contract
- `03_contract_creation/contract_approval.feature` — Unauthorized role cannot approve contracts
- `03_contract_creation/contract_creation.feature` — Create contract from template
- `03_contract_creation/contract_creation.feature` — Created contract renders in both machine-readable and human-readable views
- `03_contract_creation/contract_creation.feature` — Draft contract is editable and versioned
- `03_contract_creation/contract_creation.feature` — Assemble contract from reusable clauses
- `03_contract_creation/contract_creation.feature` — Create contract with hierarchical structure
- `03_contract_creation/contract_creation.feature` — Bundle multiple contracts into a package
- `03_contract_creation/contract_creation.feature` — Auto-fill metadata from template
- `03_contract_creation/contract_creation.feature` — Unauthorized role cannot create contracts
- `03_contract_creation/contract_creation.feature` — Contract Creator can only create contracts for authorized parties
- `03_contract_creation/contract_creation.feature` — Created contract is accessible only to authorized parties
- `03_contract_creation/contract_creation.feature` — Unauthorized party cannot access created contract
- `03_contract_creation/contract_format_review.feature` — Unauthorized role cannot access format review
- `03_contract_creation/contract_negotiation.feature` — Open draft contract for negotiation
- `03_contract_creation/contract_negotiation.feature` — Add comment to contract clause
- `03_contract_creation/contract_negotiation.feature` — Propose redline edit to contract clause
- `03_contract_creation/contract_negotiation.feature` — Track version history during negotiation
- `03_contract_creation/contract_negotiation.feature` — Approve proposed change during negotiation
- `03_contract_creation/contract_negotiation.feature` — Reject proposed change during negotiation
- `03_contract_creation/contract_negotiation.feature` — View negotiation log
- `03_contract_creation/contract_negotiation.feature` — Submit contract for review after negotiation
- `03_contract_creation/contract_negotiation.feature` — Unauthorized role cannot negotiate contracts
- `03_contract_creation/contract_negotiation.feature` — Only parties to contract can negotiate terms
- `03_contract_creation/contract_negotiation.feature` — Contract Creator and assigned Reviewers can negotiate
- `03_contract_creation/contract_negotiation.feature` — Reviewer cannot approve own redline proposals

DCS-FR-CWE-08

- `03_contract_creation/contract_creation.feature` — Draft contract is editable and versioned

- `03_contract_creation/contract_format_review.feature` — Export both formats with same version tag
- `03_contract_creation/contract_negotiation.feature` — Open draft contract for negotiation
- `03_contract_creation/contract_negotiation.feature` — Add comment to contract clause
- `03_contract_creation/contract_negotiation.feature` — Propose redline edit to contract clause
- `03_contract_creation/contract_negotiation.feature` — Track version history during negotiation
- `03_contract_creation/contract_negotiation.feature` — Approve proposed change during negotiation
- `03_contract_creation/contract_negotiation.feature` — Reject proposed change during negotiation
- `03_contract_creation/contract_negotiation.feature` — View negotiation log
- `03_contract_creation/contract_negotiation.feature` — Submit contract for review after negotiation
- `03_contract_creation/contract_negotiation.feature` — Unauthorized role cannot negotiate contracts
- `03_contract_creation/contract_negotiation.feature` — Only parties to contract can negotiate terms
- `03_contract_creation/contract_negotiation.feature` — Contract Creator and assigned Reviewers can negotiate
- `03_contract_creation/contract_negotiation.feature` — Reviewer cannot approve own redline proposals

DCS-FR-CWE-09

- `05_contract_deployment/contract_deployment.feature` — The contract target itself reports a measured KPI over the callback channel
- `05_contract_deployment/contract_deployment.feature` — A KPI reported via callback for an ACTIVE contract appears on the contract detail
- `05_contract_deployment/contract_deployment.feature` — A KPI that violates its contractual SLA threshold sets a violation flag

DCS-FR-CWE-11

- `06_contract_lifecycle/contract_termination.feature` — Contract Manager terminates an approved contract
- `06_contract_lifecycle/contract_termination.feature` — A terminated contract cannot be terminated again
- `06_contract_lifecycle/contract_termination.feature` — Contract Manager renews a contract before its expiry notice period
- `06_contract_lifecycle/contract_termination.feature` — Renewal contract references the original contract's DID and version

DCS-FR-CWE-12

- `06_contract_lifecycle/contract_termination.feature` — Contract Manager terminates an approved contract
- `06_contract_lifecycle/contract_termination.feature` — A terminated contract cannot be terminated again
- `06_contract_lifecycle/contract_termination.feature` — Contract Manager renews a contract before its expiry notice period
- `06_contract_lifecycle/contract_termination.feature` — Renewal contract references the original contract's DID and version

DCS-FR-CWE-13

- `03_contract_creation/contract_creation.feature` — Create contract from template
- `03_contract_creation/contract_creation.feature` — Created contract renders in both machine-readable and human-readable views
- `03_contract_creation/contract_creation.feature` — Draft contract is editable and versioned
- `03_contract_creation/contract_creation.feature` — Assemble contract from reusable clauses
- `03_contract_creation/contract_creation.feature` — Create contract with hierarchical structure
- `03_contract_creation/contract_creation.feature` — Bundle multiple contracts into a package
- `03_contract_creation/contract_creation.feature` — Auto-fill metadata from template
- `03_contract_creation/contract_creation.feature` — Unauthorized role cannot create contracts
- `03_contract_creation/contract_creation.feature` — Contract Creator can only create contracts for authorized parties
- `03_contract_creation/contract_creation.feature` — Created contract is accessible only to authorized parties
- `03_contract_creation/contract_creation.feature` — Unauthorized party cannot access created contract
- `12_system_based_contract_management/contract_lifecycle_via_api.feature` — Create, review, approve, sign, and archive a contract entirely via API calls
- `12_system_based_contract_management/contract_lifecycle_via_api.feature` — Contract metadata and history are queryable via API after the lifecycle completes
- `12_system_based_contract_management/system_user_classes.feature` — A System Contract Creator authenticates with its own client credentials
- `12_system_based_contract_management/system_user_classes.feature` — A System Contract Manager authenticates with its own client credentials
- `12_system_based_contract_management/system_user_classes.feature` — The System Auditor reads the audit checkpoint head it anchors externally
- `12_system_based_contract_management/system_user_classes.feature` — The System Auditor reaches the tamper-evidence surface and nothing else
- `12_system_based_contract_management/system_user_classes.feature` — A System Contract Signer cannot start a signing ceremony
- `12_system_based_contract_management/system_user_classes.feature` — A System Contract Signer cannot prepare a document for signature
- `12_system_based_contract_management/system_user_classes.feature` — A System Contract Signer cannot submit a signature

- `12_system_based_contract_management/system_user_classes.feature` — A System Contract Signer may still verify signatures it cannot create

DCS-FR-CWE-14

- `03_contract_creation/contract_approval.feature` — Initiate approval process for finalized contract
- `03_contract_creation/contract_approval.feature` — Track approval routing status
- `03_contract_creation/contract_negotiation.feature` — Open draft contract for negotiation
- `03_contract_creation/contract_negotiation.feature` — Add comment to contract clause
- `03_contract_creation/contract_negotiation.feature` — Propose redline edit to contract clause
- `03_contract_creation/contract_negotiation.feature` — Track version history during negotiation
- `03_contract_creation/contract_negotiation.feature` — Approve proposed change during negotiation
- `03_contract_creation/contract_negotiation.feature` — Reject proposed change during negotiation
- `03_contract_creation/contract_negotiation.feature` — View negotiation log
- `03_contract_creation/contract_negotiation.feature` — Submit contract for review after negotiation
- `03_contract_creation/contract_negotiation.feature` — Unauthorized role cannot negotiate contracts
- `03_contract_creation/contract_negotiation.feature` — Only parties to contract can negotiate terms
- `03_contract_creation/contract_negotiation.feature` — Contract Creator and assigned Reviewers can negotiate
- `03_contract_creation/contract_negotiation.feature` — Reviewer cannot approve own redline proposals

DCS-FR-CWE-15

- `03_contract_creation/contract_approval.feature` — Initiate approval process for finalized contract
- `03_contract_creation/contract_approval.feature` — Approve contract via approval interface
- `03_contract_creation/contract_approval.feature` — Reject contract with comments
- `03_contract_creation/contract_approval.feature` — Contract transitions to signing phase upon approval
- `03_contract_creation/contract_approval.feature` — Approval interface supports highlighting and comments
- `03_contract_creation/contract_approval.feature` — Automated compliance check during approval
- `03_contract_creation/contract_approval.feature` — Compliance monitoring detects risk during approval
- `03_contract_creation/contract_approval.feature` — Track approval routing status

- `03_contract_creation/contract_approval.feature` — Unauthorized role cannot approve contracts

DCS-FR-CWE-16

- `03_contract_creation/contract_approval.feature` — Initiate approval process for finalized contract
- `03_contract_creation/contract_approval.feature` — Approve contract via approval interface
- `03_contract_creation/contract_approval.feature` — Reject contract with comments
- `03_contract_creation/contract_approval.feature` — Contract transitions to signing phase upon approval
- `03_contract_creation/contract_approval.feature` — Approval interface supports highlighting and comments
- `03_contract_creation/contract_approval.feature` — Automated compliance check during approval
- `03_contract_creation/contract_approval.feature` — Compliance monitoring detects risk during approval
- `03_contract_creation/contract_approval.feature` — Track approval routing status
- `03_contract_creation/contract_approval.feature` — Unauthorized role cannot approve contracts

DCS-FR-CWE-17

- `03_contract_creation/contract_format_review.feature` — System highlights inconsistencies between formats

DCS-FR-CWE-18

- `03_contract_creation/contract_negotiation.feature` — Open draft contract for negotiation
- `03_contract_creation/contract_negotiation.feature` — Add comment to contract clause
- `03_contract_creation/contract_negotiation.feature` — Propose redline edit to contract clause
- `03_contract_creation/contract_negotiation.feature` — Track version history during negotiation
- `03_contract_creation/contract_negotiation.feature` — Approve proposed change during negotiation
- `03_contract_creation/contract_negotiation.feature` — Reject proposed change during negotiation
- `03_contract_creation/contract_negotiation.feature` — View negotiation log
- `03_contract_creation/contract_negotiation.feature` — Submit contract for review after negotiation
- `03_contract_creation/contract_negotiation.feature` — Unauthorized role cannot negotiate contracts
- `03_contract_creation/contract_negotiation.feature` — Only parties to contract can negotiate terms

- `03_contract_creation/contract_negotiation.feature` — Contract Creator and assigned Reviewers can negotiate
- `03_contract_creation/contract_negotiation.feature` — Reviewer cannot approve own redline proposals

DCS-FR-CWE-19

- `03_contract_creation/contract_state_machine_refactor.feature` — Signing an approved contract transitions it to SIGNED

DCS-FR-CWE-20

- `05_contract_deployment/contract_deployment.feature` — Archive entry is created only when the contract reaches SIGNED, not at APPROVED
- `05_contract_deployment/contract_deployment.feature` — An archived contract in state ACTIVE still appears in the live contract list
- `08_audit_compliance/audit_ui_archive_orce.feature` — SIGNED archival records real signing evidence without credential disclosure
- `08_audit_compliance/audit_ui_archive_orce.feature` — ORCE continues the persisted chain after a restart

DCS-FR-CWE-21

- `07_contract_storage_security/archive_management.feature` — Archive Manager retrieves the full archive list

DCS-FR-CWE-22

- `06_contract_lifecycle/contract_termination.feature` — Contract Manager renews a contract before its expiry notice period
- `06_contract_lifecycle/contract_termination.feature` — Renewal contract references the original contract's DID and version

DCS-FR-CWE-23

- `06_contract_lifecycle/contract_termination.feature` — Contract Manager terminates an approved contract
- `06_contract_lifecycle/contract_termination.feature` — A terminated contract cannot be terminated again

DCS-FR-CWE-25

- `03_contract_creation/contract_approval.feature` — Initiate approval process for finalized contract
- `03_contract_creation/contract_approval.feature` — Approve contract via approval interface
- `03_contract_creation/contract_approval.feature` — Reject contract with comments
- `03_contract_creation/contract_approval.feature` — Contract transitions to signing phase upon approval
- `03_contract_creation/contract_approval.feature` — Approval interface supports highlighting and comments
- `03_contract_creation/contract_approval.feature` — Automated compliance check during approval
- `03_contract_creation/contract_approval.feature` — Compliance monitoring detects risk during approval
- `03_contract_creation/contract_approval.feature` — Track approval routing status
- `03_contract_creation/contract_approval.feature` — Unauthorized role cannot approve contracts

DCS-FR-CWE-27

- `03_contract_creation/contract_approval.feature` — Track approval routing status
- `03_contract_creation/contract_state_machine_refactor.feature` — The contract search endpoint recognizes the new lifecycle states as a filter value

DCS-FR-CWE-28

- `12_system_based_contract_management/contract_lifecycle_via_api.feature` — Create, review, approve, sign, and archive a contract entirely via API calls
- `12_system_based_contract_management/contract_lifecycle_via_api.feature` — Contract metadata and history are queryable via API after the lifecycle completes
- `12_system_based_contract_management/system_user_classes.feature` — A System Contract Manager authenticates with its own client credentials

DCS-FR-CWE-29

- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — contract search accepts a parent_id filter and returns only contracts referencing it
- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — Frame contract detail query shows linked child contracts with their states

DCS-FR-CWE-30

- `03_contract_creation/contract_creation.feature` — Create contract from template

- `03_contract_creation/contract_creation.feature` — Created contract renders in both machine-readable and human-readable views
- `03_contract_creation/contract_creation.feature` — Draft contract is editable and versioned
- `03_contract_creation/contract_creation.feature` — Assemble contract from reusable clauses
- `03_contract_creation/contract_creation.feature` — Create contract with hierarchical structure
- `03_contract_creation/contract_creation.feature` — Bundle multiple contracts into a package
- `03_contract_creation/contract_creation.feature` — Auto-fill metadata from template
- `03_contract_creation/contract_creation.feature` — Unauthorized role cannot create contracts
- `03_contract_creation/contract_creation.feature` — Contract Creator can only create contracts for authorized parties
- `03_contract_creation/contract_creation.feature` — Created contract is accessible only to authorized parties
- `03_contract_creation/contract_creation.feature` — Unauthorized party cannot access created contract
- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — Contract bundle export returns a ZIP with all required members
- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — Child contract bundle carries the parent chain upward and its locally-known sibling under related/
- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — Every bundle-manifest.json entry's SHA-256 matches the packaged bytes
- `24_contract_bundle_export/contract_bundle_export.feature` — initiator exports a bundle containing the locally-known hierarchy
- `24_contract_bundle_export/contract_bundle_export.feature` — exporting the root frame yields the same family members

DCS-FR-CWE-31

- `05_contract_deployment/contract_deployment.feature` — An archived contract in state ACTIVE still appears in the live contract list
- `05_contract_deployment/contract_deployment.feature` — The contract target itself reports a measured KPI over the callback channel
- `05_contract_deployment/contract_deployment.feature` — A KPI reported via callback for an ACTIVE contract appears on the contract detail

DCS-FR-PACM-01

- `08_audit_compliance/process_audit_and_compliance.feature` — Auditor triggers an audit on the CONTRACT_WORKFLOW_ENGINE scope and sees the create event

DCS-FR-PACM-02

- `03_contract_creation/contract_approval.feature` — Initiate approval process for finalized contract
- `03_contract_creation/contract_approval.feature` — Approve contract via approval interface

- 03_contract_creation/contract_approval.feature — Reject contract with comments
- 03_contract_creation/contract_approval.feature — Contract transitions to signing phase upon approval
- 03_contract_creation/contract_approval.feature — Approval interface supports highlighting and comments
- 03_contract_creation/contract_approval.feature — Automated compliance check during approval
- 03_contract_creation/contract_approval.feature — Compliance monitoring detects risk during approval
- 03_contract_creation/contract_approval.feature — Track approval routing status
- 03_contract_creation/contract_approval.feature — Unauthorized role cannot approve contracts
- 08_audit_compliance/process_audit_and_compliance.feature — Compliance Officer runs continuous monitoring

DCS-FR-PACM-03

- 03_contract_creation/contract_approval.feature — Initiate approval process for finalized contract
- 03_contract_creation/contract_approval.feature — Approve contract via approval interface
- 03_contract_creation/contract_approval.feature — Reject contract with comments
- 03_contract_creation/contract_approval.feature — Contract transitions to signing phase upon approval
- 03_contract_creation/contract_approval.feature — Approval interface supports highlighting and comments
- 03_contract_creation/contract_approval.feature — Automated compliance check during approval
- 03_contract_creation/contract_approval.feature — Compliance monitoring detects risk during approval
- 03_contract_creation/contract_approval.feature — Track approval routing status
- 03_contract_creation/contract_approval.feature — Unauthorized role cannot approve contracts
- 18_odrl_soundness/odrl_soundness.feature — A contract's ODRL policies form one enclosing Offer with profile, action, parties, and target
- 18_odrl_soundness/odrl_soundness.feature — The first signature seals the offered policy set into the Agreement the signatures bind
- 18_odrl_soundness/odrl_soundness.feature — A contract with a violated ODRL constraint cannot be approved
- 18_odrl_soundness/odrl_soundness.feature — A contract with a violated ODRL constraint cannot be signed via a direct raw API call
- 18_odrl_soundness/odrl_soundness.feature — A contract with satisfied ODRL constraints is approved and signed normally
- 18_odrl_soundness/odrl_soundness.feature — A bare-Duty policy shape is rejected by structural validation
- 18_odrl_soundness/odrl_soundness.feature — Server-side operator evaluation covers all 8 ODRL operators correctly

DCS-FR-PACM-04

- `01_authentication_authorization/auth_and_access_control.feature` — Access restricted endpoint responds with access denied (PAC)
- `08_audit_compliance/audit_ui_archive_orce.feature` — Audit and export access records the actor and mandatory purpose
- `08_audit_compliance/process_audit_and_compliance.feature` — A role outside Auditor/Compliance Officer cannot trigger a process audit

DCS-FR-PACM-05

- `08_audit_compliance/process_audit_and_compliance.feature` — Compliance Officer submits a non-compliance incident report
- `08_audit_compliance/process_audit_and_compliance.feature` — A submitted incident report is persisted as a PAC audit event linked to the affected contract

DCS-FR-PACM-06

- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — Export is refused with a findings list when a referenced component is missing

DCS-FR-PACM-07

- `08_audit_compliance/process_audit_and_compliance.feature` — Auditor generates an audit report

DCS-FR-SM

- `03_contract_creation/contract_state_machine_refactor.feature` — Signing an approved contract transitions it to SIGNED

DCS-FR-SM-02

- `22_real_signing_vertical/real_signing_vertical.feature` — The ceremony also produces a JAdES signature over the machine-readable JSON-LD

DCS-FR-SM-03

- `12_system_based_contract_management/system_user_classes.feature` — A System Contract Signer cannot start a signing ceremony
- `12_system_based_contract_management/system_user_classes.feature` — A System Contract Signer cannot prepare a document for signature

- `12_system_based_contract_management/system_user_classes.feature` — A System Contract Signer cannot submit a signature
- `14_credential_acquisition/poa_credential_verification.feature` — Signer presents a PoA credential proving delegated signing authority
- `14_credential_acquisition/poa_credential_verification.feature` — A revoked PoA credential blocks signing
- `22_real_signing_vertical/poa_at_signing.feature` — A signatory with a Power of Attorney for their party signs and is compliant
- `22_real_signing_vertical/poa_at_signing.feature` — Signing is blocked when no Power of Attorney is presented at the ceremony
- `22_real_signing_vertical/poa_at_signing.feature` — Signing is blocked when the Power of Attorney authorizes a different party
- `22_real_signing_vertical/poa_at_signing.feature` — A counterparty that signed without a valid Power of Attorney is raised in audit

DCS-FR-SM-04

- `14_credential_acquisition/poa_credential_verification.feature` — Signer presents a PoA credential proving delegated signing authority
- `14_credential_acquisition/poa_credential_verification.feature` — A revoked PoA credential blocks signing
- `22_real_signing_vertical/poa_at_signing.feature` — A signatory with a Power of Attorney for their party signs and is compliant
- `22_real_signing_vertical/poa_at_signing.feature` — Signing is blocked when no Power of Attorney is presented at the ceremony
- `22_real_signing_vertical/poa_at_signing.feature` — Signing is blocked when the Power of Attorney authorizes a different party
- `22_real_signing_vertical/poa_at_signing.feature` — A counterparty that signed without a valid Power of Attorney is raised in audit

DCS-FR-SM-07

- `22_real_signing_vertical/multi_signer.feature` — Both declared signature fields must be signed before the contract activates
- `22_real_signing_vertical/multi_signer.feature` — The first signature is refused until every declared field has a completed ceremony
- `22_real_signing_vertical/multi_signer.feature` — A declared signature field cannot be signed twice

DCS-FR-SM-08

- `22_real_signing_vertical/real_signing_vertical.feature` — The signer PID is NOT embedded in the signed PDF (privacy), only the pseudonymous binding

- `22_real_signing_vertical/real_signing_vertical.feature` — A ContractSigningSummaryCredential is issued and embedded under the signature
- `22_real_signing_vertical/real_signing_vertical.feature` — Corrupting the signature-evidence attachment invalidates the embedded-PID cross-check

DCS-FR-SM-10

- `05_contract_deployment/contract_deployment.feature` — The execution-evidence receipt is TSA-timestamped and appended to the archive entry

DCS-FR-SM-11

- `22_real_signing_vertical/real_signing_vertical.feature` — The ceremony also produces a JAdES signature over the machine-readable JSON-LD

DCS-FR-SM-12

- `05_contract_deployment/contract_deployment.feature` — An authorized user deploys a SIGNED contract to the configured Contract Target System
- `05_contract_deployment/contract_deployment.feature` — The deployment payload declares the machine-readable JSON-LD, DID, version, hash, timestamp, and odr:Set
- `05_contract_deployment/contract_deployment.feature` — A contract that is not SIGNED is rejected for deployment
- `05_contract_deployment/contract_deployment.feature` — An acknowledged deployment moves the contract from SIGNED to ACTIVE

DCS-FR-SM-14

- `22_real_signing_vertical/real_signing_vertical.feature` — POST /signature/request starts a ceremony for an authorized Contract Signer
- `22_real_signing_vertical/real_signing_vertical.feature` — POST /signature/request denies a caller without an authorized signing role
- `22_real_signing_vertical/real_signing_vertical.feature` — GET /signature/request/{id} reports the ceremony's lifecycle status as it progresses
- `22_real_signing_vertical/real_signing_vertical.feature` — The webhook receiver marks the ceremony verified and persists PID claims when the shared secret is correct
- `22_real_signing_vertical/real_signing_vertical.feature` — The webhook receiver rejects a request presenting an incorrect shared secret
- `22_real_signing_vertical/real_signing_vertical.feature` — Signature Manager UI ceremony flow and AES badge - not provable from this HTTP-only BDD harness

- `22_real_signing_vertical/oid4vp_document_retrieval.feature` — Publishing a signing request emits a standard OID4VP Document-Retrieval request object
- `22_real_signing_vertical/oid4vp_document_retrieval.feature` — A wallet scanning the QR signs the fetched document and the contract reaches SIGNED via the callback
- `22_real_signing_vertical/real_signing_vertical.feature` — Applying a signature produces a PDF with a cryptographically valid PAdES signature in the named AcroForm field
- `22_real_signing_vertical/real_signing_vertical.feature` — The PAdES signature declares SubFilter ETSI.CAdES.detached with a full embedded x5chain
- `22_real_signing_vertical/real_signing_vertical.feature` — The PAdES signature carries an RFC3161 timestamp from the configured TSA (PAdES-B-T)
- `22_real_signing_vertical/real_signing_vertical.feature` — The order `/update -> /sign -> /update` leaves the PAdES signature and C2PA chain valid
- `22_real_signing_vertical/real_signing_vertical.feature` — The applied signature is a real PAdES signature persisted with an IPFS CID, not the stub placeholder
- `22_real_signing_vertical/real_signing_vertical.feature` — The apply endpoint honors the requested `signer_did` and `credential_type` instead of discarding them
- `22_real_signing_vertical/real_signing_vertical.feature` — Apply is refused with a typed error until a completed PID presentation exists for the signer
- `22_real_signing_vertical/real_signing_vertical.feature` — The signature record binds both the PDF hash and the JSON-LD content hash
- `22_real_signing_vertical/real_signing_vertical.feature` — POST `/signature/request` starts a ceremony for an authorized Contract Signer
- `22_real_signing_vertical/real_signing_vertical.feature` — POST `/signature/request` denies a caller without an authorized signing role
- `22_real_signing_vertical/real_signing_vertical.feature` — GET `/signature/request/{id}` reports the ceremony's lifecycle status as it progresses
- `22_real_signing_vertical/real_signing_vertical.feature` — The webhook receiver marks the ceremony verified and persists PID claims when the shared secret is correct
- `22_real_signing_vertical/real_signing_vertical.feature` — The webhook receiver rejects a request presenting an incorrect shared secret
- `22_real_signing_vertical/real_signing_vertical.feature` — The ceremony completes headlessly by fulfilling the OID4VP presentation/webhook contract, no wallet UI involved
- `22_real_signing_vertical/real_signing_vertical.feature` — The signer PID is NOT embedded in the signed PDF (privacy), only the pseudonymous binding
- `22_real_signing_vertical/real_signing_vertical.feature` — A `ContractSigningSummaryCredential` is issued and embedded under the signature
- `22_real_signing_vertical/real_signing_vertical.feature` — The ceremony also produces a JAdES signature over the machine-readable JSON-LD
- `22_real_signing_vertical/real_signing_vertical.feature` — Corrupting the signature-evidence attachment invalidates the embedded-PID cross-check
- `22_real_signing_vertical/real_signing_vertical.feature` — The verify side cross-checks the embedded signer binding against the signature record
- `22_real_signing_vertical/real_signing_vertical.feature` — End-to-end - accept, ceremony, AES-signed PDF, verify stays green, contract_signatures carries AES + ipfs_cid + ceremony link

- `22_real_signing_vertical/real_signing_vertical.feature` — Signature Manager UI ceremony flow and AES badge - not provable from this HTTP-only BDD harness

DCS-FR-SM-17

- `22_real_signing_vertical/multi_signer.feature` — Both declared signature fields must be signed before the contract activates
- `22_real_signing_vertical/multi_signer.feature` — The first signature is refused until every declared field has a completed ceremony
- `22_real_signing_vertical/multi_signer.feature` — A declared signature field cannot be signed twice

DCS-FR-SM-18

- `04_contract_signing/signature_validation.feature` — Contract Manager validates a signed contract's signature
- `04_contract_signing/signature_validation.feature` — Signature audit log records the apply-signature action
- `04_contract_signing/signature_validation.feature` — Contract Manager requests a compliance check for a signed contract
- `04_contract_signing/signature_validation.feature` — The compliance check flags a revoked signature
- `04_contract_signing/signature_validation.feature` — The signature view exposes signer identity, credential class, timestamp, and integrity
- `04_contract_signing/signature_validation.feature` — A role outside the signature-viewing scope cannot request the signature view
- `04_contract_signing/signature_validation.feature` — A signed contract exports as PDF/A with embedded metadata containers
- `04_contract_signing/signature_validation.feature` — Signature validation reports the EU DSS indication when a DSS instance is deployed
- `22_real_signing_vertical/oid4vp_document_retrieval.feature` — A wallet scanning the QR signs the fetched document and the contract reaches SIGNED via the callback
- `22_real_signing_vertical/real_signing_vertical.feature` — The apply endpoint honors the requested signer_id and credential_type instead of discarding them
- `22_real_signing_vertical/real_signing_vertical.feature` — The verify side cross-checks the embedded signer binding against the signature record

DCS-FR-SM-19

- `04_contract_signing/signature_validation.feature` — Contract Manager validates a signed contract's signature
- `04_contract_signing/signature_validation.feature` — Signature audit log records the apply-signature action

- `04_contract_signing/signature_validation.feature` — Contract Manager requests a compliance check for a signed contract
- `04_contract_signing/signature_validation.feature` — The compliance check flags a revoked signature
- `04_contract_signing/signature_validation.feature` — The signature view exposes signer identity, credential class, timestamp, and integrity
- `04_contract_signing/signature_validation.feature` — A role outside the signature-viewing scope cannot request the signature view
- `04_contract_signing/signature_validation.feature` — A signed contract exports as PDF/A with embedded metadata containers
- `04_contract_signing/signature_validation.feature` — Signature validation reports the EU DSS indication when a DSS instance is deployed
- `12_system_based_contract_management/system_user_classes.feature` — A System Contract Signer may still verify signatures it cannot create

DCS-FR-SM-20

- `04_contract_signing/signature_validation.feature` — The compliance check flags a revoked signature
- `15_access_revocation/signature_revocation_state.feature` — Revoking a contract's signature moves the contract to REVOKED
- `15_access_revocation/signature_revocation_state.feature` — A revoked contract can be re-approved to allow re-signing

DCS-FR-SM-21

- `04_contract_signing/signature_validation.feature` — Contract Manager validates a signed contract's signature
- `04_contract_signing/signature_validation.feature` — Signature audit log records the apply-signature action
- `04_contract_signing/signature_validation.feature` — Contract Manager requests a compliance check for a signed contract
- `04_contract_signing/signature_validation.feature` — The compliance check flags a revoked signature
- `04_contract_signing/signature_validation.feature` — The signature view exposes signer identity, credential class, timestamp, and integrity
- `04_contract_signing/signature_validation.feature` — A role outside the signature-viewing scope cannot request the signature view
- `04_contract_signing/signature_validation.feature` — A signed contract exports as PDF/A with embedded metadata containers
- `04_contract_signing/signature_validation.feature` — Signature validation reports the EU DSS indication when a DSS instance is deployed

DCS-FR-SM-25

- `22_real_signing_vertical/real_signing_vertical.feature` — Apply is refused with a typed error until a completed PID presentation exists for the signer

DCS-FR-SM-26

- `04_contract_signing/signature_validation.feature` — The signature view exposes signer identity, credential class, timestamp, and integrity
- `04_contract_signing/signature_validation.feature` — A role outside the signature-viewing scope cannot request the signature view
- `22_real_signing_vertical/poa_at_signing.feature` — A signatory with a Power of Attorney for their party signs and is compliant
- `22_real_signing_vertical/poa_at_signing.feature` — Signing is blocked when no Power of Attorney is presented at the ceremony
- `22_real_signing_vertical/poa_at_signing.feature` — Signing is blocked when the Power of Attorney authorizes a different party
- `22_real_signing_vertical/poa_at_signing.feature` — A counterparty that signed without a valid Power of Attorney is raised in audit

DCS-FR-SM-27

- `04_contract_signing/signature_validation.feature` — A signed contract exports as PDF/A with embedded metadata containers

DCS-FR-TR-01

- `02_template_management/create_template.feature` — Create a new contract template

DCS-FR-TR-02

- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — A contract document with more than one `dc:parentContract` reference is rejected
- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — A contract document with a child-enumerating property is rejected
- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — A contract whose locally resolvable parent chain contains a cycle is rejected

DCS-FR-TR-03

- `23_semantic_hub/semantic_hub.feature` — The genesis FACIS DCS context is seeded, active, and publicly resolvable
- `23_semantic_hub/semantic_hub.feature` — The genesis SHACL shapes are seeded and retrievable

- `23_semantic_hub/semantic_hub.feature` — The genesis ontology is seeded and publicly resolvable
- `23_semantic_hub/semantic_hub.feature` — A Template Manager registers a new context version and rolls back to the genesis version
- `23_semantic_hub/semantic_hub.feature` — A role outside the schema-management scope cannot register a schema version
- `23_semantic_hub/semantic_hub.feature` — A produced contract document is anchored to the Semantic Hub and the anchor resolves
- `23_semantic_hub/semantic_hub.feature` — A template redefining a hub-declared ontology prefix is rejected
- `23_semantic_hub/semantic_hub.feature` — A document can use an externally anchored context once it is registered in the hub
- `23_semantic_hub/semantic_hub.feature` — Activating a stricter SHACL shapes version changes what NEW contracts get flagged for, while already-produced contracts stay pinned
- `23_semantic_hub/semantic_hub.feature` — The clause catalog is seeded and publicly served as a generated form-schema

DCS-FR-TR-04

- `23_semantic_hub/semantic_hub.feature` — The clause catalog is seeded and publicly served as a generated form-schema

DCS-FR-TR-05

- `02_template_management/template_integrity_audit.feature` — Verifying an approved template confirms its integrity
- `02_template_management/template_integrity_audit.feature` — Template audit log records a verify action

DCS-FR-TR-06

- `01_authentication_authorization/auth_and_access_control.feature` — Access restricted endpoint responds with access denied (Template Repository)
- `01_authentication_authorization/authentication_authorization.feature` — Role enforcement prevents unauthorized actions
- `02_template_management/create_template.feature` — Unauthorized role cannot create template
- `02_template_management/search_templates.feature` — Retrieve unauthorized
- `02_template_management/template_archive.feature` — Unauthorized role cannot deprecate template
- `02_template_management/template_archive.feature` — Unauthorized role cannot delete template
- `02_template_management/template_provenance.feature` — A role outside the template scope cannot retrieve provenance credentials

- `02_template_management/template_workflow.feature` — Unauthorized role cannot approve template
- `02_template_management/update_template.feature` — Unauthorized role cannot update template

DCS-FR-TR-09

- `02_template_management/template_provenance.feature` — A registered template carries a signed provenance credential naming its actor trail
- `02_template_management/template_provenance.feature` — A role outside the template scope cannot retrieve provenance credentials
- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — Template bundle export returns a ZIP with flat template artifacts only

DCS-FR-TR-10

- `02_template_management/search_templates.feature` — Search templates by name
- `02_template_management/search_templates.feature` — Search templates by description
- `02_template_management/search_templates.feature` — Search in template details
- `02_template_management/search_templates.feature` — Retrieve unauthorized

DCS-FR-TR-11

- `02_template_management/template_identity.feature` — Template receives UUID on creation
- `02_template_management/template_identity.feature` — Retrieve template by DID

DCS-FR-TR-12

- `02_template_management/generate_contract.feature` — Generate contract from approved template

DCS-FR-TR-13

- `02_template_management/create_template.feature` — Create a new contract template
- `02_template_management/template_workflow.feature` — Register approved template

DCS-FR-TR-14

- `02_template_management/template_workflow.feature` — Submit template for review
- `02_template_management/template_workflow.feature` — Resubmit template for review

DCS-FR-TR-15

- 02_template_management/template_workflow.feature — Approve submitted template
- 02_template_management/template_workflow.feature — Reject submitted template
- 02_template_management/template_workflow.feature — Reject reviewed template without reason
- 02_template_management/template_workflow.feature — Reject reviewed template with reason
- 02_template_management/template_workflow.feature — Resubmit reviewed template
- 02_template_management/template_workflow.feature — Approve reviewed template
- 02_template_management/template_workflow.feature — Unauthorized role cannot approve template

DCS-FR-TR-16

- 02_template_management/update_template.feature — Update an existing template as creator
- 02_template_management/update_template.feature — Update an existing template as creator
- 02_template_management/update_template.feature — Update an existing template as reviewer
- 02_template_management/update_template.feature — Update an existing template as creator
- 02_template_management/update_template.feature — Unauthorized role cannot update template

DCS-FR-TR-17

- 02_template_management/template_archive.feature — Deprecate an active template
- 02_template_management/template_archive.feature — Unauthorized role cannot deprecate template
- 02_template_management/template_archive.feature — Cannot delete deprecated template
- 02_template_management/template_workflow.feature — Archive approved template

DCS-FR-TR-18

- 02_template_management/template_archive.feature — Delete reviewed template
- 02_template_management/template_archive.feature — Cannot delete deprecated template
- 02_template_management/template_archive.feature — Unauthorized role cannot delete template
- 02_template_management/template_workflow.feature — Archive submitted template

DCS-FR-TR-19

- 02_template_management/template_identity.feature — Retrieve template by DID

DCS-FR-TR-20

- `02_template_management/template_integrity_audit.feature` — Verifying an approved template confirms its integrity
- `02_template_management/template_integrity_audit.feature` — Template audit log records a verify action

DCS-FR-TR-21

- `02_template_management/template_integrity_audit.feature` — Verifying an approved template confirms its integrity
- `02_template_management/template_integrity_audit.feature` — Template audit log records a verify action

DCS-FR-TR-22

- `02_template_management/template_update_notifications.feature` — A subscriber is notified when a template it uses is updated
- `02_template_management/template_update_notifications.feature` — Subscribing to an event outside the published catalogue is rejected
- `02_template_management/template_update_notifications.feature` — The webhook platform rejects unauthenticated subscriptions

DCS-FR-TR-24

- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — Template bundle export returns a ZIP with flat template artifacts only
- `24_contract_bundle_export/contract_bundle_export.feature` — initiator exports a bundle containing the locally-known hierarchy
- `24_contract_bundle_export/contract_bundle_export.feature` — exporting the root frame yields the same family members

DCS-FR-TR-26

- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — Export is refused with a findings list when a referenced component is missing

DCS-FR-UC-01-2

- `01_authentication_authorization/auth_and_access_control.feature` — Public auth endpoint responds successfully
- `01_authentication_authorization/auth_and_access_control.feature` — Logout without a session is rejected

- `01_authentication_authorization/auth_and_access_control.feature` — Access restricted endpoint responds with access denied (CWE)
- `01_authentication_authorization/auth_and_access_control.feature` — Access restricted endpoint responds with access denied (Archive)
- `01_authentication_authorization/auth_and_access_control.feature` — Access restricted endpoint responds with access denied (Template Repository)
- `01_authentication_authorization/auth_and_access_control.feature` — Access restricted endpoint responds with access denied (Catalogue)
- `01_authentication_authorization/auth_and_access_control.feature` — Access restricted endpoint responds with access denied (Signature)
- `01_authentication_authorization/auth_and_access_control.feature` — Access restricted endpoint responds with access denied (PAC)
- `01_authentication_authorization/auth_and_access_control.feature` — Access restricted endpoint responds with access denied (Peer)

DCS-FR-UC-01-1

- `01_authentication_authorization/authentication_authorization.feature` — Authorization denied for expired credential
- `01_authentication_authorization/authentication_authorization.feature` — Role enforcement prevents unauthorized actions
- `01_authentication_authorization/authentication_authorization.feature` — Multiple failed credential attempts trigger account logout
- `01_authentication_authorization/authentication_authorization.feature` — Locked account cannot authenticate even with valid credential

DCS-FR-UC-01-3

- `01_authentication_authorization/authentication_authorization.feature` — Authorization denied for expired credential
- `01_authentication_authorization/authentication_authorization.feature` — Role enforcement prevents unauthorized actions
- `01_authentication_authorization/authentication_authorization.feature` — Multiple failed credential attempts trigger account logout
- `01_authentication_authorization/authentication_authorization.feature` — Locked account cannot authenticate even with valid credential

DCS-FR-UC-01-4

- `01_authentication_authorization/authentication_authorization.feature` — Authorization denied for expired credential
- `01_authentication_authorization/authentication_authorization.feature` — Role enforcement prevents unauthorized actions

- `01_authentication_authorization/authentication_authorization.feature` — Multiple failed credential attempts trigger account lockout
- `01_authentication_authorization/authentication_authorization.feature` — Locked account cannot authenticate even with valid credential

DCS-FR-UC-05-1

- `05_contract_deployment/contract_deployment.feature` — Archive entry is created only when the contract reaches SIGNED, not at APPROVED
- `05_contract_deployment/contract_deployment.feature` — An archived contract in state ACTIVE still appears in the live contract list
- `05_contract_deployment/contract_deployment.feature` — An authorized user deploys a SIGNED contract to the configured Contract Target System
- `05_contract_deployment/contract_deployment.feature` — The deployment payload declares the machine-readable JSON-LD, DID, version, hash, timestamp, and odr!Set
- `05_contract_deployment/contract_deployment.feature` — A contract that is not SIGNED is rejected for deployment
- `05_contract_deployment/contract_deployment.feature` — Deployment is triggered automatically once the signing workflow completes
- `05_contract_deployment/contract_deployment.feature` — The deployment callback rejects a request without a valid shared secret
- `05_contract_deployment/contract_deployment.feature` — The shipped ORCE contract-target-flow verifies the content hash and returns a matching ack
- `05_contract_deployment/contract_deployment.feature` — The execution-evidence receipt is TSA-timestamped and appended to the archive entry
- `05_contract_deployment/contract_deployment.feature` — An acknowledged deployment moves the contract from SIGNED to ACTIVE
- `05_contract_deployment/contract_deployment.feature` — The contract target itself reports a measured KPI over the callback channel
- `05_contract_deployment/contract_deployment.feature` — A KPI reported via callback for an ACTIVE contract appears on the contract detail
- `05_contract_deployment/contract_deployment.feature` — A KPI that violates its contractual SLA threshold sets a violation flag

DCS-FR-UC-13-1

- `05_contract_deployment/contract_deployment.feature` — Archive entry is created only when the contract reaches SIGNED, not at APPROVED
- `05_contract_deployment/contract_deployment.feature` — An archived contract in state ACTIVE still appears in the live contract list
- `05_contract_deployment/contract_deployment.feature` — An authorized user deploys a SIGNED contract to the configured Contract Target System
- `05_contract_deployment/contract_deployment.feature` — The deployment payload declares the machine-readable JSON-LD, DID, version, hash, timestamp, and odr!Set

- `05_contract_deployment/contract_deployment.feature` — A contract that is not SIGNED is rejected for deployment
- `05_contract_deployment/contract_deployment.feature` — Deployment is triggered automatically once the signing workflow completes
- `05_contract_deployment/contract_deployment.feature` — The deployment callback rejects a request without a valid shared secret
- `05_contract_deployment/contract_deployment.feature` — The shipped ORCE contract-target-flow verifies the content hash and returns a matching ack
- `05_contract_deployment/contract_deployment.feature` — The execution-evidence receipt is TSA-timestamped and appended to the archive entry
- `05_contract_deployment/contract_deployment.feature` — An acknowledged deployment moves the contract from SIGNED to ACTIVE
- `05_contract_deployment/contract_deployment.feature` — The contract target itself reports a measured KPI over the callback channel
- `05_contract_deployment/contract_deployment.feature` — A KPI reported via callback for an ACTIVE contract appears on the contract detail
- `05_contract_deployment/contract_deployment.feature` — A KPI that violates its contractual SLA threshold sets a violation flag

DCS-IR-CI-04

- `01_authentication_authorization/auth_and_access_control.feature` — Public auth endpoint responds successfully
- `01_authentication_authorization/auth_and_access_control.feature` — Logout without a session is rejected
- `01_authentication_authorization/authentication_authorization.feature` — Authorization denied for expired credential

DCS-IR-CI-08

- `04_contract_signing/signature_validation.feature` — Signature validation reports the EU DSS indication when a DSS instance is deployed

DCS-IR-CSA-01

- `07_contract_storage_security/archive_management.feature` — Archive Manager retrieves the full archive list
- `07_contract_storage_security/archive_management.feature` — Archive search filters by contract state
- `07_contract_storage_security/archive_management.feature` — A role outside the archive scope cannot retrieve the archive
- `07_contract_storage_security/archive_management.feature` — Auditor retrieves the archive audit log

- `07_contract_storage_security/archive_management.feature` — Archive Manager deletes an archived contract with a logged justification
- `07_contract_storage_security/archive_management.feature` — A role outside the archive scope cannot delete an archived contract
- `07_contract_storage_security/archive_management.feature` — A read-only Observer can view the archive but cannot delete from it
- `07_contract_storage_security/archive_management.feature` — Archive full-text search finds a contract by terms inside its content
- `07_contract_storage_security/archive_management.feature` — Archive Manager annotates an archived contract with a manual summary and tags
- `07_contract_storage_security/archive_management.feature` — Searching the archive by tag returns only contracts carrying that tag
- `07_contract_storage_security/archive_management.feature` — Annotating without a summary generates one from the contract metadata
- `07_contract_storage_security/archive_management.feature` — A read-only role cannot annotate an archived contract

DCS-IR-CSA-04

- `07_contract_storage_security/archive_management.feature` — Auditor retrieves the archive audit log
- `08_audit_compliance/audit_ui_archive_orce.feature` — Auditor can filter every audit scope to a real resource DID
- `08_audit_compliance/audit_ui_archive_orce.feature` — Archive Manager is restricted to the archive audit scope
- `08_audit_compliance/audit_ui_archive_orce.feature` — Audit scope and justification are validated
- `08_audit_compliance/audit_ui_archive_orce.feature` — Archive integrity results carry unambiguous workstation semantics
- `08_audit_compliance/audit_ui_archive_orce.feature` — An empty audit is an explicit successful state
- `08_audit_compliance/audit_ui_archive_orce.feature` — Audit API reports an infrastructure failure separately from an empty result
- `08_audit_compliance/audit_ui_archive_orce.feature` — A pre-effective contract remains visible as lifecycle evidence
- `08_audit_compliance/audit_ui_archive_orce.feature` — A valid archive entry passes each independent integrity rule
- `08_audit_compliance/audit_ui_archive_orce.feature` — Archive evidence defects are returned as individual failed findings
- `08_audit_compliance/audit_ui_archive_orce.feature` — SIGNED archival records real signing evidence without credential disclosure
- `08_audit_compliance/audit_ui_archive_orce.feature` — ORCE continues the persisted chain after a restart
- `08_audit_compliance/audit_ui_archive_orce.feature` — ORCE protects both append and retrieval with the configured bearer token

- `08_audit_compliance/audit_ui_archive_orce.feature` — ORCE append is idempotent and rejects conflicting reuse of an archive ID
- `08_audit_compliance/audit_ui_archive_orce.feature` — Every report format contains the complete filtered audit result
- `08_audit_compliance/audit_ui_archive_orce.feature` — Audit and export access records the actor and mandatory purpose
- `08_audit_compliance/audit_ui_archive_orce.feature` — One damaged archive entry does not hide a valid entry and both audit routes agree

DCS-IR-CSA-05

- `07_contract_storage_security/archive_management.feature` — Archive Manager retrieves the full archive list
- `07_contract_storage_security/archive_management.feature` — Archive search filters by contract state
- `07_contract_storage_security/archive_management.feature` — A role outside the archive scope cannot retrieve the archive
- `07_contract_storage_security/archive_management.feature` — Auditor retrieves the archive audit log
- `07_contract_storage_security/archive_management.feature` — Archive Manager deletes an archived contract with a logged justification
- `07_contract_storage_security/archive_management.feature` — A role outside the archive scope cannot delete an archived contract
- `07_contract_storage_security/archive_management.feature` — A read-only Observer can view the archive but cannot delete from it
- `07_contract_storage_security/archive_management.feature` — Archive full-text search finds a contract by terms inside its content
- `07_contract_storage_security/archive_management.feature` — Archive Manager annotates an archived contract with a manual summary and tags
- `07_contract_storage_security/archive_management.feature` — Searching the archive by tag returns only contracts carrying that tag
- `07_contract_storage_security/archive_management.feature` — Annotating without a summary generates one from the contract metadata
- `07_contract_storage_security/archive_management.feature` — A read-only role cannot annotate an archived contract

DCS-IR-CSA-06

- `07_contract_storage_security/archive_management.feature` — A read-only Observer can view the archive but cannot delete from it

DCS-IR-CWE-05

- `03_contract_creation/contract_state_machine_refactor.feature` — Approve on a draft contract is rejected via the UI-API entry path
- `03_contract_creation/contract_state_machine_refactor.feature` — Submit, review, and approve still reach APPROVED under the new transition table

DCS-IR-CWE-06

- `03_contract_creation/contract_state_machine_refactor.feature` — Approve on a draft contract is rejected via the UI-API entry path
- `03_contract_creation/contract_state_machine_refactor.feature` — Submit, review, and approve still reach APPROVED under the new transition table

DCS-IR-CWE-07

- `03_contract_creation/contract_state_machine_refactor.feature` — Approve on a draft contract is rejected via the UI-API entry path
- `03_contract_creation/contract_state_machine_refactor.feature` — Submit, review, and approve still reach APPROVED under the new transition table

DCS-IR-CWE-08

- `03_contract_creation/contract_state_machine_refactor.feature` — Approve on a draft contract is rejected via the UI-API entry path
- `03_contract_creation/contract_state_machine_refactor.feature` — Submit, review, and approve still reach APPROVED under the new transition table

DCS-IR-CWE-09

- `03_contract_creation/contract_approval.feature` — Approval interface supports highlighting and comments
- `03_contract_creation/contract_state_machine_refactor.feature` — Approve on a draft contract is rejected via the UI-API entry path
- `03_contract_creation/contract_state_machine_refactor.feature` — Submit, review, and approve still reach APPROVED under the new transition table

DCS-IR-CWE-10

- `03_contract_creation/contract_state_machine_refactor.feature` — Approve on a draft contract is rejected via the UI-API entry path
- `03_contract_creation/contract_state_machine_refactor.feature` — Submit, review, and approve still reach APPROVED under the new transition table

DCS-IR-HI-01

- `21_pki_consolidation_pkcs11/pki_consolidation_pkcs11.feature` — A correctly PKCS#11-configured backend is reachable and serves its HSM-backed DID document
- `21_pki_consolidation_pkcs11/pki_consolidation_pkcs11.feature` — The published DID key is an ECDSA P-256 JWK, not an RSA JWK
- `21_pki_consolidation_pkcs11/pki_consolidation_pkcs11.feature` — The OpenID4VP authorization request JWT (JAR) is ES256-signed by the `dcx-oid4vp-jar` HSM key
- `21_pki_consolidation_pkcs11/pki_consolidation_pkcs11.feature` — The exported PDF's Contract-Lifecycle-VC proof is ECDSA/ES256, not Ed25519Signature2020
- `21_pki_consolidation_pkcs11/pki_consolidation_pkcs11.feature` — The peer-sync challenge is DID-key signed with ECDSA P-256 and verified on both instances
- `21_pki_consolidation_pkcs11/pki_consolidation_pkcs11.feature` — A full PDF export's embedded C2PA manifest declares COSE alg ES256, not EdDSA
- `21_pki_consolidation_pkcs11/pki_consolidation_pkcs11.feature` — `DCS_TRUST_ANCHORS` switches the trust-anchor source for all verification layers
- `21_pki_consolidation_pkcs11/pki_consolidation_pkcs11.feature` — Revoking the dev signing certificate in the CRL flips a previously valid signature to invalid
- `21_pki_consolidation_pkcs11/pki_consolidation_pkcs11.feature` — A historical signature made with the old HSM key keeps validating after rotation, while a new signature uses the new key

DCS-IR-PACM-01

- `08_audit_compliance/audit_ui_archive_orce.feature` — Auditor can filter every audit scope to a real resource DID
- `08_audit_compliance/audit_ui_archive_orce.feature` — Archive Manager is restricted to the archive audit scope
- `08_audit_compliance/audit_ui_archive_orce.feature` — Audit scope and justification are validated
- `08_audit_compliance/audit_ui_archive_orce.feature` — Archive integrity results carry unambiguous workstation semantics
- `08_audit_compliance/audit_ui_archive_orce.feature` — An empty audit is an explicit successful state
- `08_audit_compliance/audit_ui_archive_orce.feature` — Audit API reports an infrastructure failure separately from an empty result
- `08_audit_compliance/audit_ui_archive_orce.feature` — A pre-effective contract remains visible as lifecycle evidence
- `08_audit_compliance/audit_ui_archive_orce.feature` — A valid archive entry passes each independent integrity rule
- `08_audit_compliance/audit_ui_archive_orce.feature` — Archive evidence defects are returned as individual failed findings
- `08_audit_compliance/audit_ui_archive_orce.feature` — SIGNED archival records real signing evidence without credential disclosure
- `08_audit_compliance/audit_ui_archive_orce.feature` — ORCE continues the persisted chain after a restart

- `08_audit_compliance/audit_ui_archive_orce.feature` — ORCE protects both append and retrieval with the configured bearer token
- `08_audit_compliance/audit_ui_archive_orce.feature` — ORCE append is idempotent and rejects conflicting reuse of an archive ID
- `08_audit_compliance/audit_ui_archive_orce.feature` — Every report format contains the complete filtered audit result
- `08_audit_compliance/audit_ui_archive_orce.feature` — Audit and export access records the actor and mandatory purpose
- `08_audit_compliance/audit_ui_archive_orce.feature` — One damaged archive entry does not hide a valid entry and both audit routes agree
- `08_audit_compliance/process_audit_and_compliance.feature` — Auditor triggers an audit on the `CONTRACT_WORKFLOW_ENGINE` scope and sees the create event
- `08_audit_compliance/process_audit_and_compliance.feature` — A role outside Auditor/Compliance Officer cannot trigger a process audit
- `08_audit_compliance/process_audit_and_compliance.feature` — Auditor generates an audit report
- `08_audit_compliance/process_audit_and_compliance.feature` — Compliance Officer runs continuous monitoring
- `08_audit_compliance/process_audit_and_compliance.feature` — Compliance Officer submits a non-compliance incident report
- `08_audit_compliance/process_audit_and_compliance.feature` — A submitted incident report is persisted as a PAC audit event linked to the affected contract
- `12_system_based_contract_management/system_user_classes.feature` — The System Auditor reads the audit checkpoint head it anchors externally
- `12_system_based_contract_management/system_user_classes.feature` — The System Auditor reaches the tamper-evidence surface and nothing else

DCS-IR-PACM-02

- `08_audit_compliance/audit_ui_archive_orce.feature` — Auditor can filter every audit scope to a real resource DID
- `08_audit_compliance/audit_ui_archive_orce.feature` — Archive Manager is restricted to the archive audit scope
- `08_audit_compliance/audit_ui_archive_orce.feature` — Audit scope and justification are validated
- `08_audit_compliance/audit_ui_archive_orce.feature` — Archive integrity results carry unambiguous workstation semantics
- `08_audit_compliance/audit_ui_archive_orce.feature` — An empty audit is an explicit successful state
- `08_audit_compliance/audit_ui_archive_orce.feature` — Audit API reports an infrastructure failure separately from an empty result
- `08_audit_compliance/audit_ui_archive_orce.feature` — A pre-effective contract remains visible as lifecycle evidence
- `08_audit_compliance/audit_ui_archive_orce.feature` — A valid archive entry passes each independent integrity rule

- `08_audit_compliance/audit_ui_archive_orce.feature` — Archive evidence defects are returned as individual failed findings
- `08_audit_compliance/audit_ui_archive_orce.feature` — SIGNED archival records real signing evidence without credential disclosure
- `08_audit_compliance/audit_ui_archive_orce.feature` — ORCE continues the persisted chain after a restart
- `08_audit_compliance/audit_ui_archive_orce.feature` — ORCE protects both append and retrieval with the configured bearer token
- `08_audit_compliance/audit_ui_archive_orce.feature` — ORCE append is idempotent and rejects conflicting reuse of an archive ID
- `08_audit_compliance/audit_ui_archive_orce.feature` — Every report format contains the complete filtered audit result
- `08_audit_compliance/audit_ui_archive_orce.feature` — Audit and export access records the actor and mandatory purpose
- `08_audit_compliance/audit_ui_archive_orce.feature` — One damaged archive entry does not hide a valid entry and both audit routes agree
- `08_audit_compliance/process_audit_and_compliance.feature` — Auditor generates an audit report

DCS-IR-PACM-03

- `03_contract_creation/contract_approval.feature` — Compliance monitoring detects risk during approval
- `08_audit_compliance/process_audit_and_compliance.feature` — Compliance Officer runs continuous monitoring

DCS-IR-PACM-04

- `08_audit_compliance/process_audit_and_compliance.feature` — Compliance Officer submits a non-compliance incident report
- `08_audit_compliance/process_audit_and_compliance.feature` — A submitted incident report is persisted as a PAC audit event linked to the affected contract

DCS-IR-SI-01

- `01_authentication_authorization/auth_and_access_control.feature` — Access restricted endpoint responds with access denied (Catalogue)
- `02_template_management/template_catalogue.feature` — Template Manager publishes a registered template to the catalogue
- `02_template_management/template_catalogue.feature` — A published template can be retrieved via the catalogue
- `02_template_management/template_catalogue.feature` — A published template can be found via catalogue search

- `02_template_management/template_catalogue.feature` — A role outside the catalogue scope cannot publish a template

DCS-IR-SI-02

- `05_contract_deployment/contract_deployment.feature` — The shipped ORCE contract-target-flow verifies the content hash and returns a matching ack
- `05_contract_deployment/contract_deployment.feature` — The execution-evidence receipt is TSA-timestamped and appended to the archive entry
- `05_contract_deployment/contract_deployment.feature` — An acknowledged deployment moves the contract from SIGNED to ACTIVE
- `05_contract_deployment/contract_deployment.feature` — The contract target itself reports a measured KPI over the callback channel

DCS-IR-SI-04

- `22_real_signing_vertical/oid4vp_document_retrieval.feature` — Publishing a signing request emits a standard OID4VP Document-Retrieval request object
- `22_real_signing_vertical/oid4vp_document_retrieval.feature` — A wallet scanning the QR signs the fetched document and the contract reaches SIGNED via the callback

DCS-IR-SI-05

- `05_contract_deployment/contract_deployment.feature` — The deployment payload declares the machine-readable JSON-LD, DID, version, hash, timestamp, and odr!Set
- `05_contract_deployment/contract_deployment.feature` — The deployment callback rejects a request without a valid shared secret
- `05_contract_deployment/contract_deployment.feature` — The shipped ORCE contract-target-flow verifies the content hash and returns a matching ack
- `05_contract_deployment/contract_deployment.feature` — The contract target itself reports a measured KPI over the callback channel

DCS-IR-SI-08

- `01_authentication_authorization/auth_and_access_control.feature` — Public auth endpoint responds successfully

DCS-IR-SI-10

- `04_contract_signing/signature_validation.feature` — Signature validation reports the EU DSS indication when a DSS instance is deployed
- `22_real_signing_vertical/real_signing_vertical.feature` — Applying a signature produces a PDF with a cryptographically valid PAdES signature in the named AcroForm field

- `22_real_signing_vertical/real_signing_vertical.feature` — The PAdES signature declares SubFilter ETSI.CAdES.detached with a full embedded x5chain
- `22_real_signing_vertical/real_signing_vertical.feature` — The PAdES signature carries an RFC3161 timestamp from the configured TSA (PAdES-B-T)
- `22_real_signing_vertical/real_signing_vertical.feature` — The order `/update -> /sign -> /update` leaves the PAdES signature and C2PA chain valid
- `22_real_signing_vertical/real_signing_vertical.feature` — The applied signature is a real PAdES signature persisted with an IPFS CID, not the stub placeholder
- `22_real_signing_vertical/real_signing_vertical.feature` — The apply endpoint honors the requested `signer_did` and `credential_type` instead of discarding them
- `22_real_signing_vertical/real_signing_vertical.feature` — Apply is refused with a typed error until a completed PID presentation exists for the signer
- `22_real_signing_vertical/real_signing_vertical.feature` — The signature record binds both the PDF hash and the JSON-LD content hash
- `22_real_signing_vertical/real_signing_vertical.feature` — POST `/signature/request` starts a ceremony for an authorized Contract Signer
- `22_real_signing_vertical/real_signing_vertical.feature` — POST `/signature/request` denies a caller without an authorized signing role
- `22_real_signing_vertical/real_signing_vertical.feature` — GET `/signature/request/{id}` reports the ceremony's lifecycle status as it progresses
- `22_real_signing_vertical/real_signing_vertical.feature` — The webhook receiver marks the ceremony verified and persists PID claims when the shared secret is correct
- `22_real_signing_vertical/real_signing_vertical.feature` — The webhook receiver rejects a request presenting an incorrect shared secret
- `22_real_signing_vertical/real_signing_vertical.feature` — The ceremony completes headlessly by fulfilling the OID4VP presentation/webhook contract, no wallet UI involved
- `22_real_signing_vertical/real_signing_vertical.feature` — The signer PID is NOT embedded in the signed PDF (privacy), only the pseudonymous binding
- `22_real_signing_vertical/real_signing_vertical.feature` — A `ContractSigningSummaryCredential` is issued and embedded under the signature
- `22_real_signing_vertical/real_signing_vertical.feature` — The ceremony also produces a JAdES signature over the machine-readable JSON-LD
- `22_real_signing_vertical/real_signing_vertical.feature` — Corrupting the signature-evidence attachment invalidates the embedded-PID cross-check
- `22_real_signing_vertical/real_signing_vertical.feature` — The verify side cross-checks the embedded signer binding against the signature record
- `22_real_signing_vertical/real_signing_vertical.feature` — End-to-end - accept, ceremony, AES-signed PDF, verify stays green, `contract_signatures` carries AES + `ipfs_cid` + ceremony link
- `22_real_signing_vertical/real_signing_vertical.feature` — Signature Manager UI ceremony flow and AES badge - not provable from this HTTP-only BDD harness

DCS-IR-SM-05

- `04_contract_signing/signature_validation.feature` — The signature view exposes signer identity, credential class, timestamp, and integrity

DCS-NFR-BR-02

- `03_contract_creation/contract_creation.feature` — Contract Creator can only create contracts for authorized parties

DCS-NFR-BR-03

- `05_contract_deployment/contract_deployment.feature` — A contract that is not SIGNED is rejected for deployment
- `22_real_signing_vertical/multi_signer.feature` — Both declared signature fields must be signed before the contract activates

DCS-NFR-BR-04

- `02_template_management/generate_contract.feature` — Generate contract from approved template

DCS-NFR-BR-08

- `01_authentication_authorization/auth_and_access_control.feature` — Access restricted endpoint responds with access denied (Peer)
- `03_contract_creation/contract_state_machine_refactor.feature` — Withdraw is rejected once the contract has been approved
- `03_contract_creation/contract_state_machine_refactor.feature` — Offering a contract emits a typed OFFER outbox event
- `03_contract_creation/contract_state_machine_refactor.feature` — Withdrawing a contract emits a typed WITHDRAW outbox event
- `17_peer_trust/two_instance_peer_trust.feature` — The agreement credential names this instance's DID as issuer and its rules by policy ID and hash
- `17_peer_trust/two_instance_peer_trust.feature` — The agreement credential's signature verifies against the instance's own published VC key
- `17_peer_trust/two_instance_peer_trust.feature` — Both instances of the same build publish the same federation rules hash
- `17_peer_trust/two_instance_peer_trust.feature` — A contract offered on instance A appears on its counterparty B
- `17_peer_trust/two_instance_peer_trust.feature` — PostPdf rejects a peer that publishes no agreement credential at all
- `17_peer_trust/two_instance_peer_trust.feature` — An offer towards a peer whose agreement credential names a different rules hash is refused
- `17_peer_trust/two_instance_peer_trust.feature` — Instance A refuses to ship without a valid agreement credential from instance B
- `17_peer_trust/two_instance_peer_trust.feature` — An inbound PostPdf interaction consults the local policy endpoint before proceeding

- `17_peer_trust/two_instance_peer_trust.feature` — An outbound ship consults the local policy endpoint before proceeding
- `17_peer_trust/two_instance_peer_trust.feature` — A denying policy endpoint rejects the interaction with exactly one incident and no retry
- `17_peer_trust/two_instance_peer_trust.feature` — The policy endpoint receives peerDID, agreementCredential, direction, contractDID, and targetState
- `17_peer_trust/two_instance_peer_trust.feature` — An unreachable policy endpoint fails closed with exactly one incident and no retry
- `17_peer_trust/two_instance_peer_trust.feature` — Mutual trust between instances runs through the default Node-RED policy flow

DCS-NFR-BR-09

- `02_template_management/template_catalogue.feature` — Template Manager publishes a registered template to the catalogue
- `02_template_management/template_catalogue.feature` — A published template can be retrieved via the catalogue
- `02_template_management/template_catalogue.feature` — A published template can be found via catalogue search
- `02_template_management/template_catalogue.feature` — A role outside the catalogue scope cannot publish a template

DCS-NFR-SEC-02

- `21_pki_consolidation_pkcs11/pki_consolidation_pkcs11.feature` — A correctly PKCS#11-configured backend is reachable and serves its HSM-backed DID document
- `21_pki_consolidation_pkcs11/pki_consolidation_pkcs11.feature` — The published DID key is an ECDSA P-256 JWK, not an RSA JWK
- `21_pki_consolidation_pkcs11/pki_consolidation_pkcs11.feature` — The OpenID4VP authorization request JWT (JAR) is ES256-signed by the dcs-oid4vp-jar HSM key
- `21_pki_consolidation_pkcs11/pki_consolidation_pkcs11.feature` — The exported PDF's Contract-Lifecycle-VC proof is ECDSA/ES256, not Ed25519Signature2020
- `21_pki_consolidation_pkcs11/pki_consolidation_pkcs11.feature` — The peer-sync challenge is DID-key signed with ECDSA P-256 and verified on both instances
- `21_pki_consolidation_pkcs11/pki_consolidation_pkcs11.feature` — A full PDF export's embedded C2PA manifest declares COSE alg ES256, not EdDSA
- `21_pki_consolidation_pkcs11/pki_consolidation_pkcs11.feature` — DCS_TRUST_ANCHORS switches the trust-anchor source for all verification layers
- `21_pki_consolidation_pkcs11/pki_consolidation_pkcs11.feature` — Revoking the dev signing certificate in the CRL flips a previously valid signature to invalid
- `21_pki_consolidation_pkcs11/pki_consolidation_pkcs11.feature` — A historical signature made with the old HSM key keeps validating after rotation, while a new signature uses the new key

DCS-NFR-SEC-03

- `01_authentication_authorization/auth_and_access_control.feature` — Public auth endpoint responds successfully
- `01_authentication_authorization/auth_and_access_control.feature` — Logout without a session is rejected
- `01_authentication_authorization/auth_and_access_control.feature` — Access restricted endpoint responds with access denied (CWE)
- `01_authentication_authorization/auth_and_access_control.feature` — Access restricted endpoint responds with access denied (Archive)

- `01_authentication_authorization/auth_and_access_control.feature` — Access restricted endpoint responds with access denied (Peer)
- `01_authentication_authorization/authentication_authorization.feature` — Authorization denied for expired credential
- `01_authentication_authorization/authentication_authorization.feature` — Role enforcement prevents unauthorized actions
- `03_contract_creation/contract_creation.feature` — Created contract is accessible only to authorized parties
- `03_contract_creation/contract_creation.feature` — Unauthorized party cannot access created contract

DCS-NFR-SEC-08

- `03_contract_creation/contract_creation.feature` — Created contract is accessible only to authorized parties
- `03_contract_creation/contract_creation.feature` — Unauthorized party cannot access created contract

DCS-NFR-SEC-09

- `16_other/prometheus_monitoring.feature` — /metrics endpoint is exposed

DCS-NFR-SEC-10

- `08_audit_compliance/c2pa_provenance_export.feature` — Exported PDF contains C2PA lifecycle assertion

- `08_audit_compliance/c2pa_provenance_export.feature` — C2PA lifecycle assertion carries all required fields
- `08_audit_compliance/c2pa_provenance_export.feature` — C2PA manifest is appended as incremental update preserving base PDF
- `08_audit_compliance/c2pa_provenance_export.feature` — C2PA manifest chain links successive lifecycle events
- `08_audit_compliance/c2pa_provenance_export.feature` — Verify endpoint confirms MR/HR hash match on freshly exported PDF

DCS-NFR-SEC-11

- `16_other/prometheus_monitoring.feature` — /metrics endpoint is exposed

DCS-NFR-SEC-18

- `22_real_signing_vertical/real_signing_vertical.feature` — The webhook receiver marks the ceremony verified and persists PID claims when the shared secret is correct
- `22_real_signing_vertical/real_signing_vertical.feature` — The webhook receiver rejects a request presenting an incorrect shared secret
- `22_real_signing_vertical/real_signing_vertical.feature` — The signer PID is NOT embedded in the signed PDF (privacy), only the pseudonymous binding

DCS-NFR-SQ-07

- `16_other/frontend.feature` — Accessing the frontend

DCS-OR-C2PA-003

- `03_contract_creation/contract_state_machine_refactor.feature` — C2PA lifecycle mapping is valid for every reachable new-machine contract state
- `08_audit_compliance/c2pa_provenance_export.feature` — Exported PDF contains C2PA lifecycle assertion
- `08_audit_compliance/c2pa_provenance_export.feature` — C2PA lifecycle assertion carries all required fields
- `08_audit_compliance/c2pa_provenance_export.feature` — C2PA manifest chain links successive lifecycle events

DCS-OR-C2PA

- `08_audit_compliance/c2pa_provenance_export.feature` — Exported PDF contains C2PA lifecycle assertion
- `08_audit_compliance/c2pa_provenance_export.feature` — C2PA lifecycle assertion carries all required fields

- `08_audit_compliance/c2pa_provenance_export.feature` — C2PA manifest is appended as incremental update preserving base PDF
- `08_audit_compliance/c2pa_provenance_export.feature` — C2PA manifest chain links successive lifecycle events
- `08_audit_compliance/c2pa_provenance_export.feature` — Verify endpoint confirms MR/HR hash match on freshly exported PDF

DCS-OR-C2PA-001

- `08_audit_compliance/c2pa_provenance_export.feature` — Exported PDF contains C2PA lifecycle assertion

DCS-OR-C2PA-002

- `08_audit_compliance/c2pa_provenance_export.feature` — C2PA manifest is appended as incremental update preserving base PDF
- `22_real_signing_vertical/real_signing_vertical.feature` — Applying a signature produces a PDF with a cryptographically valid PAdES signature in the named AcroForm field
- `22_real_signing_vertical/real_signing_vertical.feature` — The PAdES signature declares SubFilter ETSI.CAdES.detached with a full embedded x5chain
- `22_real_signing_vertical/real_signing_vertical.feature` — The PAdES signature carries an RFC3161 timestamp from the configured TSA (PAdES-B-T)
- `22_real_signing_vertical/real_signing_vertical.feature` — The order `/update -> /sign -> /update` leaves the PAdES signature and C2PA chain valid

DCS-OR-C2PA-010

- `08_audit_compliance/c2pa_provenance_export.feature` — C2PA manifest is appended as incremental update preserving base PDF
- `22_real_signing_vertical/real_signing_vertical.feature` — Applying a signature produces a PDF with a cryptographically valid PAdES signature in the named AcroForm field
- `22_real_signing_vertical/real_signing_vertical.feature` — The PAdES signature declares SubFilter ETSI.CAdES.detached with a full embedded x5chain
- `22_real_signing_vertical/real_signing_vertical.feature` — The PAdES signature carries an RFC3161 timestamp from the configured TSA (PAdES-B-T)
- `22_real_signing_vertical/real_signing_vertical.feature` — The order `/update -> /sign -> /update` leaves the PAdES signature and C2PA chain valid

DCS-OR-C2PA-008

- `19_c2pa_conformance/c2pa_conformance.feature` — The public C2PA manifest endpoint returns the raw manifest store without auth
- `19_c2pa_conformance/c2pa_conformance.feature` — The manifest history query returns a parsed JSON chain enumeration instead of raw bytes

- `19_c2pa_conformance/c2pa_conformance.feature` — The embedded manifest's `remote_manifests` claim field references the public manifest endpoint
- `19_c2pa_conformance/c2pa_conformance.feature` — Verification succeeds from the remote manifest after the embedded attachment is stripped
- `19_c2pa_conformance/c2pa_conformance.feature` — The verify endpoint reports the matching `lifecycle_status` banner for each state
- `19_c2pa_conformance/c2pa_conformance.feature` — The verify endpoint reports the "expired" `lifecycle_status` banner after the expiry cron fires
- `19_c2pa_conformance/c2pa_conformance.feature` — Replaced lifecycle banner is a documented gap, not a BDD result
- `19_c2pa_conformance/c2pa_conformance.feature` — The verify response carries four independently named checks, and PDF signature is honestly "not yet available"

DCS-OR-C2PA-006

- `19_c2pa_conformance/c2pa_conformance.feature` — The verify endpoint reports the matching `lifecycle_status` banner for each state
- `19_c2pa_conformance/c2pa_conformance.feature` — The verify endpoint reports the "expired" `lifecycle_status` banner after the expiry cron fires
- `19_c2pa_conformance/c2pa_conformance.feature` — Replaced lifecycle banner is a documented gap, not a BDD result
- `19_c2pa_conformance/c2pa_conformance.feature` — The verify response carries four independently named checks, and PDF signature is honestly "not yet available"

DCS-OR-C2PA-007

- `21_pki_consolidation_pkcs11/pki_consolidation_pkcs11.feature` — Revoking the dev signing certificate in the CRL flips a previously valid signature to invalid
- `21_pki_consolidation_pkcs11/pki_consolidation_pkcs11.feature` — A historical signature made with the old HSM key keeps validating after rotation, while a new signature uses the new key

DCS-OR-H

- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — A contract document with more than one `dcsparentContract` reference is rejected
- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — A contract document with a child-enumerating property is rejected
- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — A contract whose locally resolvable parent chain contains a cycle is rejected
- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — contract search accepts a `parent_id` filter and returns only contracts referencing it
- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — Sibling isolation — instance B never sees a child kept local to instance A

- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — Frame contract detail query shows linked child contracts with their states
- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — Contract bundle export returns a ZIP with all required members
- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — Child contract bundle carries the parent chain upward and its locally-known sibling under related/
- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — Every bundle-manifest.json entry's SHA-256 matches the packaged bytes
- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — Export is refused with a findings list when a referenced component is missing
- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — Template bundle export returns a ZIP with flat template artifacts only
- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — Contract bundle export honors RBAC like retrieval
- `20_contract_hierarchy_bundle_export/contract_hierarchy_bundle_export.feature` — Contract bundle export creates an audit log entry
- `24_contract_bundle_export/contract_bundle_export.feature` — initiator exports a bundle containing the locally-known hierarchy
- `24_contract_bundle_export/contract_bundle_export.feature` — exporting the root frame yields the same family members

Ohne SRS-Zuordnung (@DCS-UNMAPPED oder ohne SRS-Tag)

Szenarien, die keine SRS-Anforderung abbilden (z. B. rein ADR-getriebene Absicherungen) — im Audit begründet:

- `01_authentication_authorization/authentication_authorization.feature` — Multiple failed credential attempts trigger account logout
- `01_authentication_authorization/authentication_authorization.feature` — Locked account cannot authenticate even with valid credential
- `03_contract_creation/contract_state_machine_refactor.feature` — Initiator offers a draft contract and it becomes OFFERED
- `03_contract_creation/contract_state_machine_refactor.feature` — Initiator withdraws a contract from a pre-approval state
